2 ABSTRACT OF DISCLOSURE

3

4 An end user friendly method of categorizing, aggregating, classifying, reporting and
5 cross-tabbing data, in real time. The unique method interlinks a server with remote interfaces.
6 Templates of the present method propound stimuli at the user. An authorized user can govern
7 the format of the templates from the remote interface. The method can also include the step of
8 classifying the authorized response into at least two sub-classifications.
